BASKETS & CARTS-CONTAINER HANDLING

Maximize Retort Efficiency

When purchasing a new Allpax retort, or if you have existing retorts, you'll need the right equipment for handling your containers in that retort. Allpax accessories are designed to be as robust and efficient as possible when your product is inside or outside the retort.

FEATURES AND BENEFITS

- **Construction Accuracy:** Allpax takes advantage of Laser cutting technology and precision bending to insure tight tolerances and repeatability.
- **Durable Materials:** Conservative designs for robust long term performance.
- **Maximum Open Area:** Allpax uses in house thermal process engineers for basket design based on real world heat penetration data to ensure efficient process times.
- **Mechanically Engineered Product:** Small details related to latches, and retort mechanical interface are calculated and designed for long lasting performance.
- **Ergonomically Friendly:** In manual operations, designs are optimized to make it easier on the operator when loading and unloading products.
