

RETORT ENERGY RECOVERY

Steam and Water Recovery

Are Your Retorts Using Too Much Energy?

Retorts create large volumes of hot water during a process.

Processing Plants consume large volumes of hot water for operations.

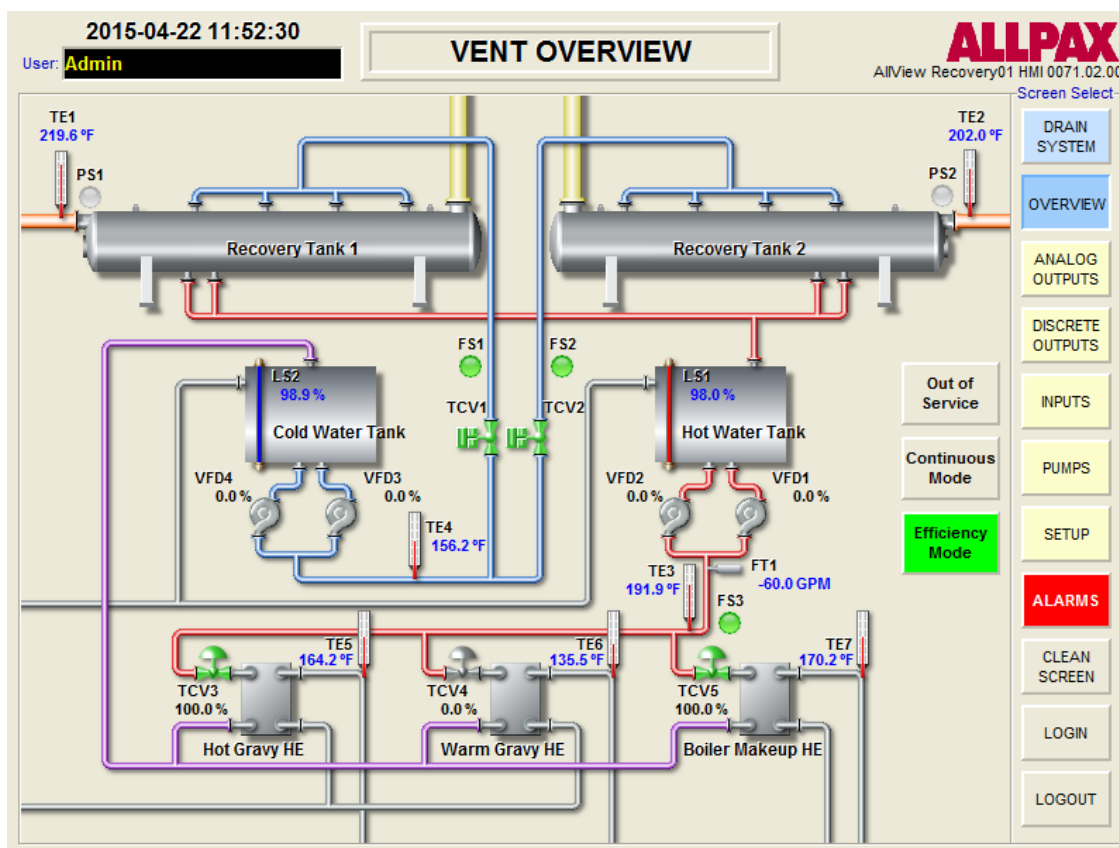

Allpax Water Reclamation systems can reduce water usage by as much as 50% and provide free hot water for plant consumption.

RETORT ENERGY RECOVERY

Steam Recapture

Allpax developed technology designed to harness wasted energy on saturated steam retorts by capturing vented steam and creating free hot water for plant operations.

- Allpax custom designs energy recovery systems to fit plant needs.
- PLC controls and graphic HMI screens capture the critical variables.
- Allpax Recovery Systems can be remotely monitored via cloud based interface.
- Allpax Energy Recovery products facilitate LEED certification initiatives and ISO 50000 Energy Management Systems.
